

Simply protected

EMiZON

Seriously secure

Higher security lower costs

Emizon IP is the [advanced signalling service](#) that combines enhanced premises protection with lower insurance premiums.

Emizon IP replaces the 'weak link' in your security system, the conventional telephone line, and replaces it with [two connections](#). The first leverages your [existing broadband](#) internet connection; the second uses Vodafone, T-Mobile, O2 and Orange GPRS [wireless technology](#).

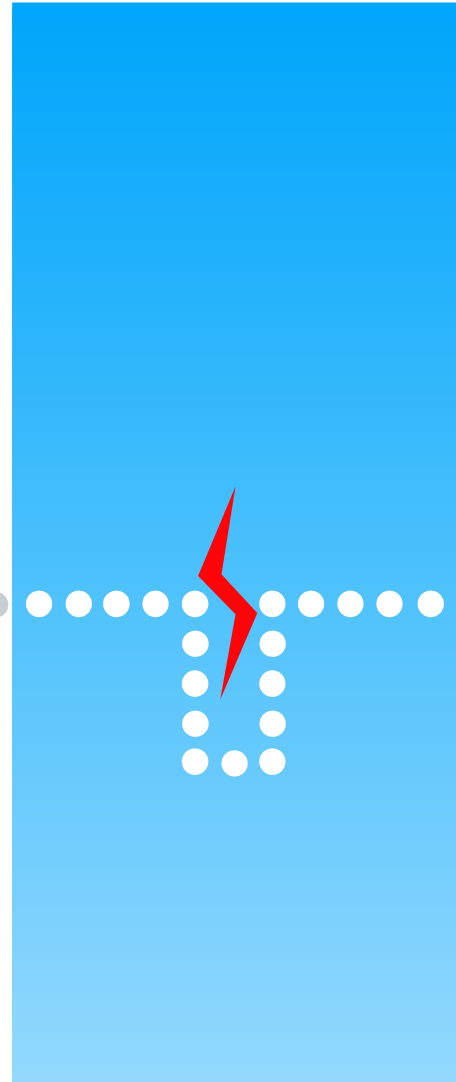

This powerful combination makes Emizon IP the secure and [cost-effective](#) signalling solution for [any building](#).

No broadband? No problem. [Emizon IP](#) can be connected to your PSTN phone line ready to upgrade when broadband is available.

Smarter and faster

Emizon IP offers three key advantages over traditional alarm signalling services.

- It is designed to share your broadband connection or IP network, removing the need for dedicated analogue PSTN alarm lines - so you can save around **£200** on every site you upgrade.
- It allows your alarm provider to talk directly to your alarm panel. As a result, engineers can always interrogate your system, conduct routine service and run maintenance procedures - all from their offices. This means a fast response to service issues, fewer call-out charges, and no inconvenience.
- Because your broadband connection is constantly monitored you get to know if there is any disruption to your business critical communications.

Take a closer look

- **More reliable**

Uses your existing broadband connection for an 'always-on' link between your alarm system and monitoring centre.

- **More secure**

Alarms always get through. Emizon IP sends a 'confirmed' activation using either broadband or GPRS wireless networks.

- **More affordable**

Charges cover all communications - and no more dedicated line rentals to pay!

- **Fully approved**

Meets the exacting requirements of the security industry, insurance companies and police services. Emizon IP has been independently tested and passed for compliance with the highest Grade 4 EN signalling standards.

- **Easy to deploy, cost-effective to manage**

Emizon IP fits seamlessly into modern alarm panels. Enables your alarm company to manage and maintain your system without unnecessary call-outs and charges.

- **Future-proof**

Designed for the internet, and ready for use with fibre and next generation networks. Not all signalling services are this compliant.

- **Flexible**

Works with any broadband service or PSTN phone line and all GPRS networks.

Easy installation

Emizon IP is simple to install as part of any existing or new alarm system.

It shares your office broadband connection, so you do not need to rent a dedicated line. In addition, you benefit from extra security because broadband connections are constantly monitored.
